

## Welding sockets

with and without collar

### SPECIFICATION

#### Types

- Type **A**: with chamfer
- Type **B**: with collar

#### Steel **ST**

- weldable
- turned
- blank

### INFORMATION

Welding sockets GN 7490 are used in container construction or in hydraulics for mounting instruments such as oil level sight glasses or locking caps.

The plane surfaces are machined, with the effect that they can be used as sealing surface in connection with a sealing element or compound.

The favourably dimensioned wall thickness prevents deformation or burn-through during welding.

Type B is used if exact positioning through the mounting bore or a low construction height is required.

### ON REQUEST

- Stainless Steel-Welding sockets
- metric threads

### Examples of application

\*Complete with type index of the Welding sockets

**A** with chamfer      **B** with collar
